

Use [vpnc](#) instead of Cisco VPN client

```
tc qdisc add dev tun0 root handle 1:0
```

Contents: [Dobrica Pavlinu's random unstructured stuff]

- [Dobrica Pavlinu's random unstructured stuff \(Source\)](#)
- [Dobrica Pavlinu's random unstructured stuff \(Support template\)](#)
- [Dobrica Pavlinu's random unstructured stuff \(Start connection\)](#)
- [Dobrica Pavlinu's random unstructured stuff \(Fix routes\)](#)

Source

```
svn co http://svn.unix-ag.uni-kl.de/vpnc/trunk vpnc
cd vpnc
make
sudo make install
```

Support template

```
pcf2vpnc Support_template.pcf > /etc/vpnc/foobar.conf
```

Hash password security, eh?

Start connection

```
sudo /usr/local/sbin/vpnc --no-detach --debug 2 foobar
```

Fix routes

I didn't like that all my traffic was going over VPN

```
sudo route del default
route add default gw 192.168.1.1
route add -net 192.168.4.0 netmask 255.255.255.0 dev tun0
```
