

This page collect various parts which used to be in [Socialtext Open Wiki Install](#), but since they are more oriented towards wiki admins and designers, it's here as separate page.

Contents: [Dobrica PavlinuÅiÄ 's random unstructured stuff]

- [Dobrica PavlinuÅiÄ 's random unstructured stuff \(New skin \(CSS design\) creation\)](#)
- [Dobrica PavlinuÅiÄ 's random unstructured stuff \(Keep local changes in SVN\)](#)

New skin (CSS design) creation

```
cd /usr/share/nlw/css/  
cp -r st rot13  
st-admin set-workspace-config --workspace rot13 skin_name rot13  
vi rot13/screen.css
```

See also [CSS kit](#) at SocialText Open Wiki

Keep local changes in SVN

It's important to save local modifications, because next `make install` **will overwrite** your changes in `/usr/share/nlw`. One possibility is to do overlay svn checout over `/usr/share/nlw` and than `svn add` and `svn commit` every change:

```
cd /usr/share  
svn co file:///data/st-custom/share nlw.svn  
cd nlw.svn  
find . | cpio -pdu ../nlw/  
cd - && rm -Rf nlw.svn  
cd nlw  
svn info
```
