

oÅ¾ujak, 2008:

- \* ima jedan server od FF-a na raspolaganju, kaÅ¾e Gjuro. treba se javiti Banetu
- \* Dobrica i Bane stupili u kontakt oko servera
- \* traÅ¾ene i dobivene i IP adrese
- \* za sad instalirane 2 virtualne maÅ¾ine na mjesecu - koha-dev.rot13.org i koha.rot13.org

### **Koliko je Koha zahtijevna i koliko moÅ¾e izdrÅ¾ati?**

opac.liblime.com is running with 1.5 million bib records and 2 million items: that's about 3 Gigs of binary MARC data, about 10 Gigs of MySQL space, and about 31 Gigs of Zebra index. The server it's running on has 2 gigs of RAM.

recomended separate physical disks for mysql, zebra registers, zebra shadow files, and the filesystem itself.
